

POWERBROKER AUDITOR FOR SQL SERVER

REAL-TIME AUDITING AND COMPLIANCE REPORTING FOR MICROSOFT SQL SERVER

A single change can put your critical applications and data at risk, affecting productivity, risking security breaches and threatening non-compliance. Yet, built-in SQL Server auditing capabilities are cumbersome, cryptic and lack centralized auditing and reporting. Careful analysis of distributed logs requires enormous resources and still fails to paint the entire picture of SQL activity. PowerBroker Auditor for SQL Server brings a new level of centralized control and ease to SQL Server auditing and compliance. This powerful solution monitors all SQL Server activity in real time - tracking the "WHO, WHAT, WHERE, WHEN" for every change.

COMPREHENSIVE CHANGE MONITORING - WHO, WHAT, WHERE, WHEN ...

PowerBroker Auditor for SQL Server captures all the essential information for any modification, including who made the change, when it was made and where it was made. Additionally, unlike other auditing solutions, PowerBroker Auditor for SQL Server provides interactive analysis with flexible attribute level filtering and reporting. This enables administrators to more accurately and rapidly isolate users or programs that may be making inappropriate changes in your environment.

CENTRALIZED, AUTOMATED REPORTING FOR STREAMLINED COMPLIANCE

PowerBroker's advanced change monitoring capabilities help ensure that your organization is in compliance with external

regulations and internal security initiatives. You can also prove to auditors that corporate policies for compliance have not deviated over time. Its built-in reporting library offers out-of-the box reporting templates, while the custom reporting wizard makes it easy to create custom reports and alerts on any SQL Server change, including flexible filtering. With Blackbird's zero-touch scheduled reporting, you can run reports against the central database and automatically email reports to administrators, security officers and business data owners. In addition, PowerBroker Auditor for SQL Server translates all events into plain English.

MINIMIZE THE IMPACT OF ERRENEOUS SQL SERVER CHANGES WITH INSTANT ALERTS

PowerBroker Auditor for SQL Server enables administrators to quickly react and resolve critical changes that could affect the security or availability of your organization's critical applications. Seamless integration with the PowerBroker Management Suite means there's no easier or safer way to ensure the continuous availability of the applications and access rights your organization depends on every day.

POWERBROKER MANAGEMENT SUITE: SEAMLESS LIFECYCLE-MANAGEMENT

PowerBroker Auditor for SQL Server is part of the PowerBroker Management Suite, a fully integrated, end-to-end solution that seamlessly guides administrators through the entire identity and access lifecycle - from real-time auditing of AD, File System, SQL-Server and Exchange to compliance reporting, proactive safeguards and recovery. A single dashboard provides a

consolidated view for unprecedented ease and efficiency in identity and access management.

ABOUT BEYONDTRUST

BeyondTrust is also a leader in identity and access management. BeyondTrust's innovative solutions help organizations make the most of their technology investments and Windows infrastructure - with simpler compliance, streamlined governance, increased IT efficiency, and greater application availability.

BeyondTrust is a Microsoft Gold Certified Partner with more than two million installed seats worldwide.

KEY BENEFITS:

- Monitor and review privileged user changes on SQL servers and at database levels
- Comply with regulatory mandates such as GLBA, SOX, HIPAA and PCI through consistent auditing and reporting
- Instant notification of administrators about inappropriate SQL modifications
- Tighter security and audit procedures
- Reduction of manual labor cost associated with security and compliance reporting
- Improved employee productivity

KEY FEATURES:

- Real-time monitoring of SQL (2005, 2008 and 2012) environments including changes to server configurations, security, databases, etc.
- A central audit database for reporting and alerting against all change activity
- An extensive library of security and compliance reports
- Intuitive wizards for custom views and reports
- The originating IP address for each change
- Intelligent auditing that displays a single entry for every event
- Plain English filtering, searching and reporting at the attribute level
- Audit event analytics for every object
- Single-click access to the change log of every SQL Server change event
- Does not require native event configuration or event logs
- Integrates seamlessly with the PowerBroker Management Suite

The screenshot displays the PowerBroker Auditor for SQL Server interface. The main window shows a table of function changes with columns for Date and Time, Event, Server, Database, Login, Object Name, and Object Type. A selected row shows a CREATE_FUNCTION event on 19.11.2014 19:30:54 for the BeyondTrust server, performed by PARENT\ms01admin on the BeyondTrust database, creating the bspExchDateShift function. Below the table is an Activity Summary pie chart showing SQL Server activity (191 events) with a 90.05% share, MS01\PBMS with 172 events (90.05%), and MS01\BEYONDINSIGHT with 19 events (9.95%). The right-hand pane shows the details of the selected function, including its definition: CREATE FUNCTION [dbo].[bspExchDateShift] with parameters @Frequency int, @Bias int, and @When datetime, returning a datetime value.
